Texts monitor Nigerian elections

Anyone trying to rig or tamper with Saturday's presidential elections in Nigeria could be caught out by a team of volunteers armed with mobile phones.

The Network of Mobile Election Monitors (NMEM) will use SMS to feedback their observations to a central computer hub.

The collected text messages will then be passed on to other monitoring groups and authorities including the EU.

NMEM hopes the system will stop fraud, especially in areas considered too dangerous for other groups to enter.

"We want to set a precedent," said Emauwa Nelson of the Human Emancipation Lead Project, a Nigerian NGO that helped set up the project.

"We want people to know that if they are trying to rig the election, there could be someone behind them and that person may send a text message saying what happened."

Voting will decide who will succeed Olusegun Obasanjo.

Mobile phones and protest
Cats, mice and handsets
Nov 29th 2007 | SÃO PAULO
From *The Economist* print edition

Protesters and governments are mastering the tricks of the mobile trade
BACK in September, protesters from many parts of the United States poured into the small town of Jena, Louisiana, to express their anger over the over-zealous prosecution (as they saw it) of six young African-Americans on charges of assault. Mobile-phone text messages played an important role in pulling in the crowd.

AFP But for pioneers of mobile telephony and texts as tools of protest and dissent, simply summoning people to demonstrations—a technique first deployed in the Philippines as long ago as 2001—is old hat. The search is on for ever more creative ways to use this
